

# How to Create a New Strong Game

Creating engaging experiences that break down barriers and help bring people together is now at your fingertips. We've put together this quick walk-through welcome package to get you up and creating your own custom Strong Games as quickly as possible!

Click to jump to a specific step or follow along as we walk you through creating your very own, custom Strong Game. Let's hit the ground running!

## **Table of Contents**

(click to jump to section)

Step 1: Application website login

Step 2: Setup new Game

**Step 3: Create questions** 

- Trivia question type / example
- Social question type / example
- Media question type / example
  - o Reducing Video Size for Uploads
- Survey question type / example

Step 4: Create a theme

Step 5: Finalize game settings

- Working with teams
- Game options
- How game scoring works
- Game timing

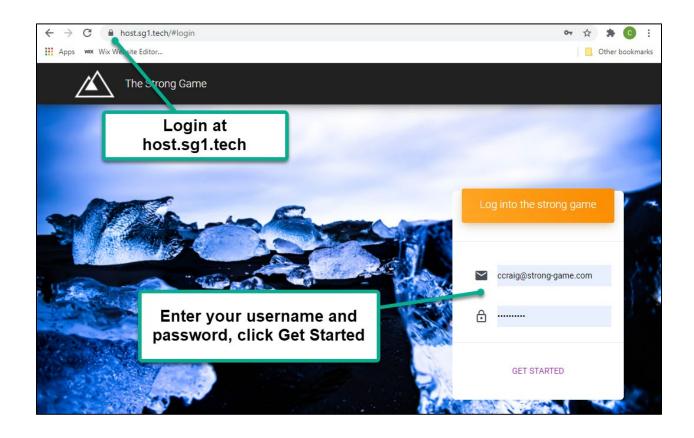

Step 6: Running a game

Admin Controls and Navigation

# Step 1: Login to the Strong Game Player Application

(https://host.sg1.tech)

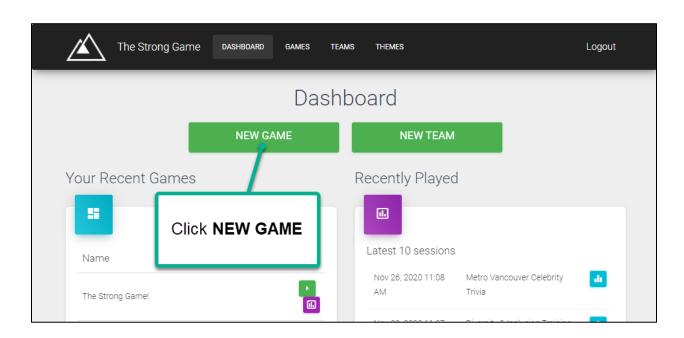

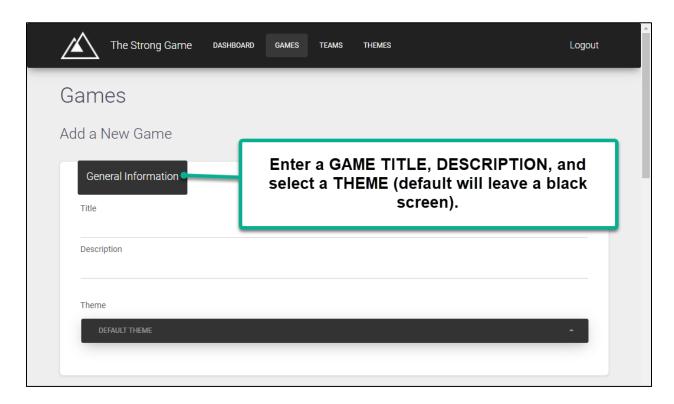

### Don't have a Strong Game account setup yet? No problem!

Email us at <a href="mailto:info@strong-game.com">info@strong-game.com</a> and we'll create an account for you in a snap!

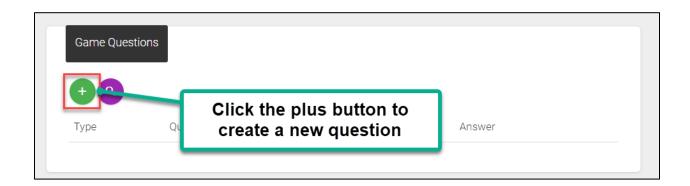

# Step 2: Setup New Game

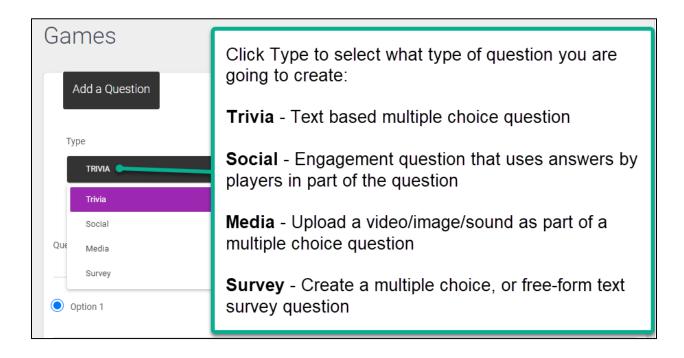

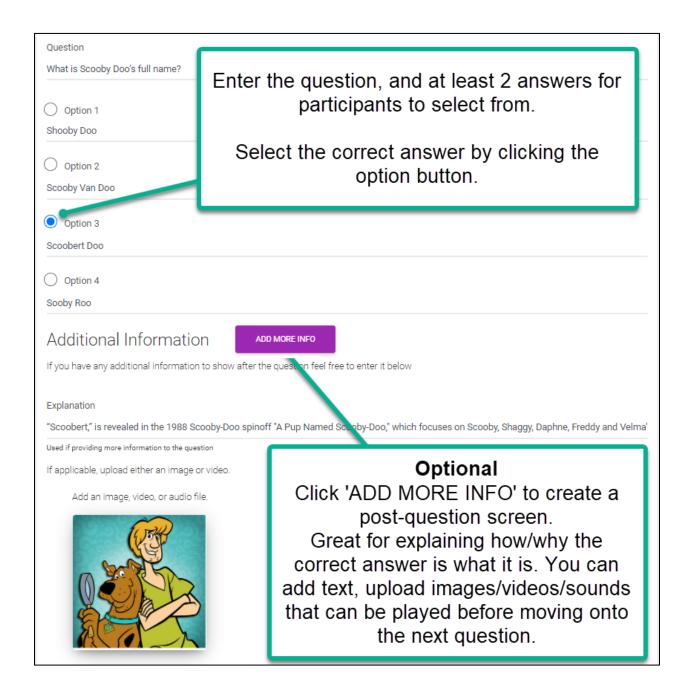

# Step 3: Create Questions

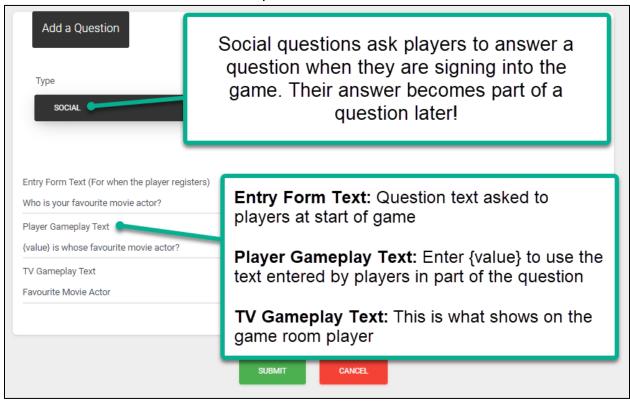

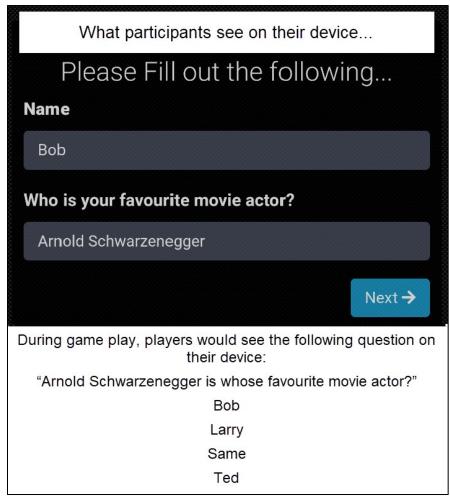

#### Trivia Game Question Instruction Example

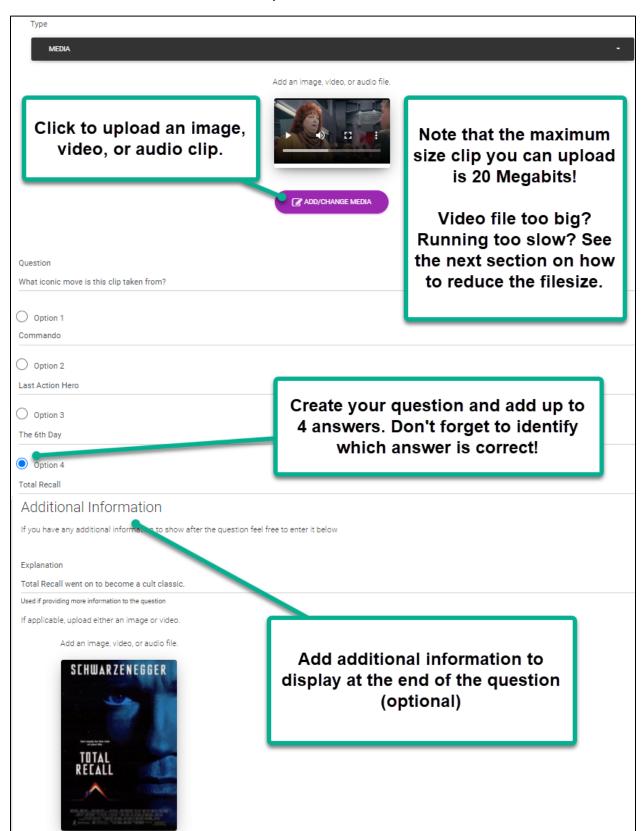

#### Social Question Instruction and Example

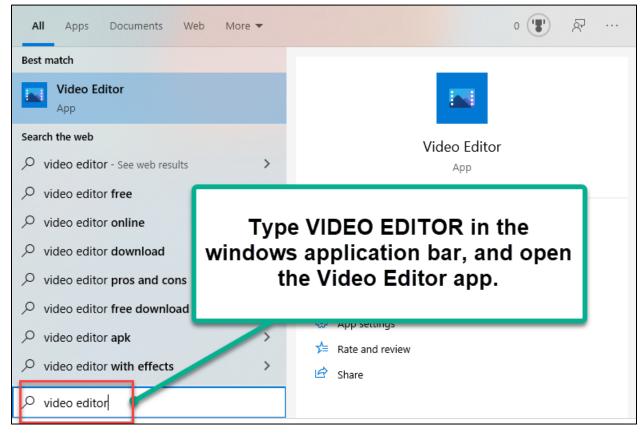

#### Media Question Instruction and Example

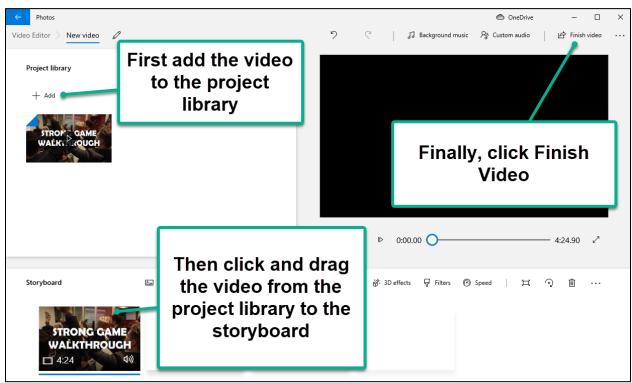

### Reducing Video Size for Uploads

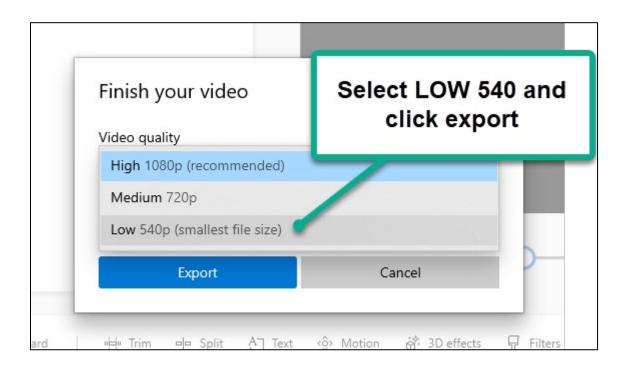

You can quickly and easily reduce video file size using included Windows software!

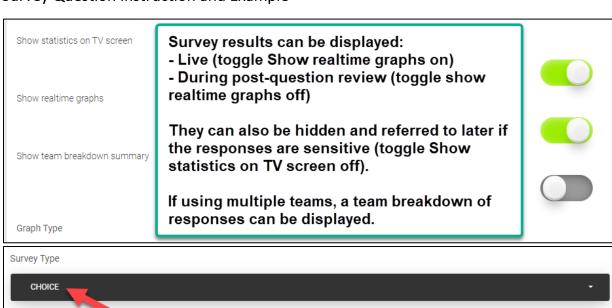

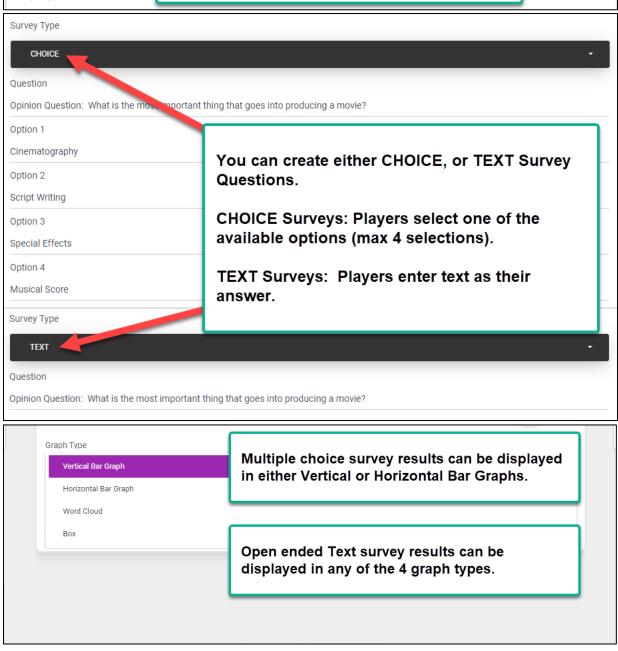

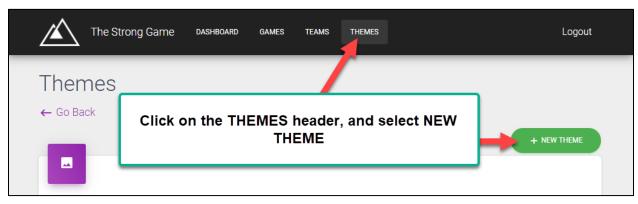

### Survey Question Instruction and Example

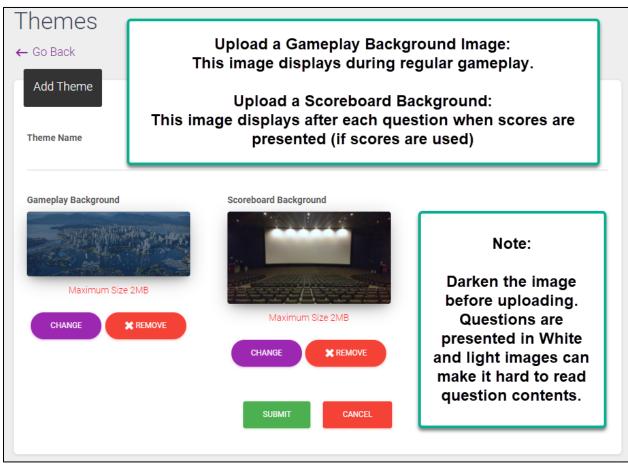

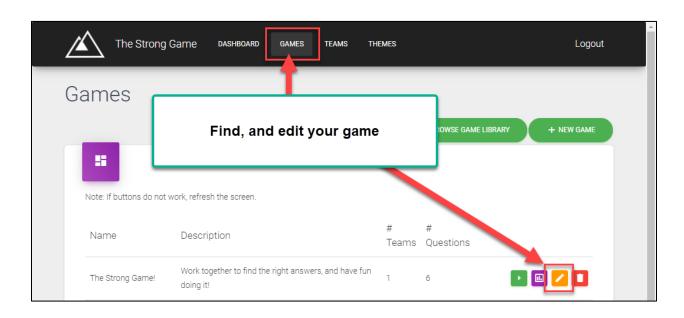

Step 4: Create a Theme

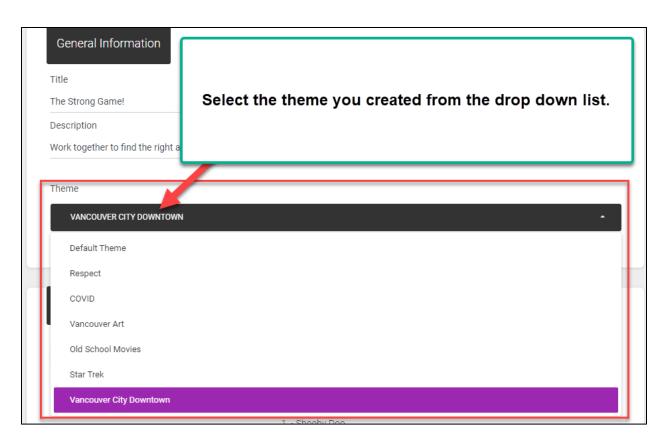

### Assign a theme to your Game

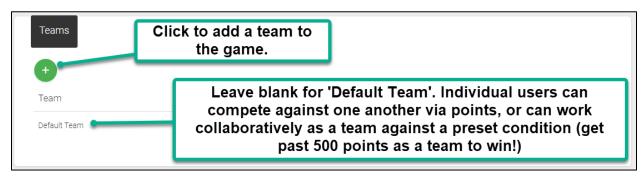

## Step 5: Finalize Game Settings

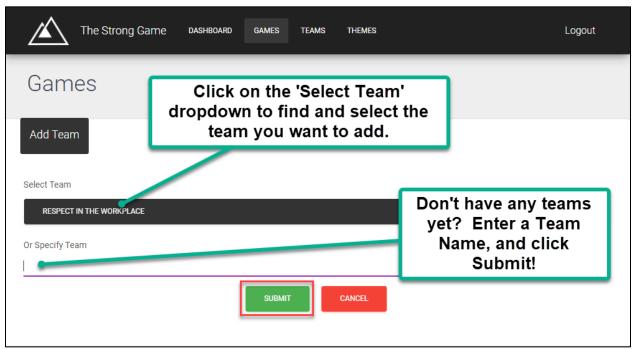

You're almost there! Before you can fire up your one-of-a-kind, custom Strong Game, it's important the game is setup the way you want it to run!

#### Working with Teams

By default, there has to be at least one team. If you have only one team, then it means everyone is working together. Collaborative play is great for a number of reasons, but we won't get into that here.

If you want more than one team in your game (and who would blame you? Pitting opposing teams against one another is a blast!), you'll need to create the teams in your game.

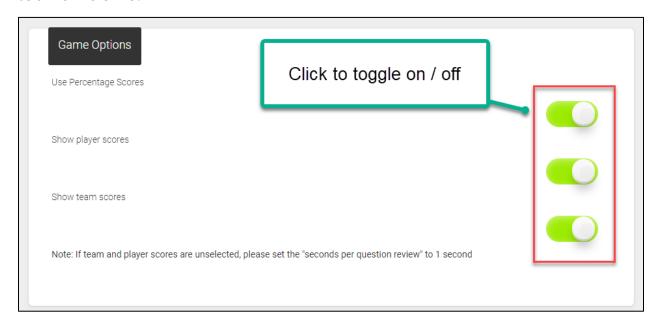

#### **Game Options**

All game options are ON by default. But you may not want to use them. Review the option descriptions below for more info!

#### **Use Percentage Scores**

See the next section, 'How Game Scoring Works'

#### **Show Player Scores**

- Turn this on if you want to include individual points on your game. This is a must for 'everyone for themselves' competitive play!
- Turn it off if you do not want individual points to be displayed (e.g. if you are using this as a softskill training tool, or a team-based game only).

#### **Show Team Scores**

- Turn this on if you have more than one team duking it out!
- Turn this on if you are creating a collaborative game where everyone works as a single team, striving to pick the best answers and get the most points! (e.g. safety in the workplace game, but the whole team needs to collaborate together to pick the best answers, and get at least 500 points to win the prize!)

#### **How Game Scoring Works**

#### **Regular Scoring**

To use regular scoring, turn percentage scoring off.

In a regular scoring game, each correct answer is worth 100 points.

#### **Percentage Scoring**

The Percentage scoring system motivates players to work together as the higher the ratio of people agree on the correct answer, the more points they can get.

For the sake of explanation, we will use and example of 10 people playing together.

When 8 out of 10 participants get the right answer, they will get 80 points. We recommend in this type of Strong Game that individual points are turned off. So in the above case, the 2 other members of the team are not penalized for guessing wrong. Lastly, if 2 of the 10 members are correct, and the other 8 are wrong, the team will get 20 points.

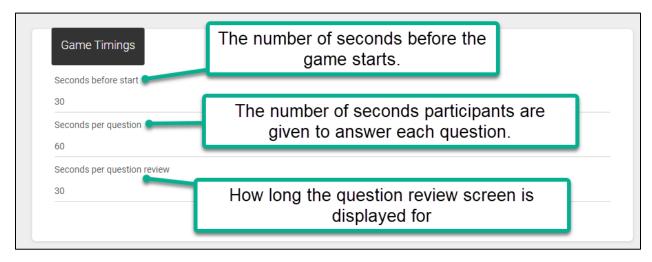

So for calculating the team score over a five question game would look like the following:

- Question 1) Question Type: Trivia: 1 out of 10 were correct: 10 Points
- Question 2) Question Type: Social: 9 out of 10 were correct: 90 Points
- Question 3) Question Type: Survey: No points
- Question 4) Question Type: Media: 3 out of 10 were correct: 30 Points
- Question 5) Question Type: Trivia: 10 out of 10 were correct: 100 Points

The total points for the group would be 230 points.

### **Game Timing**

You can change the timers for each game, depending on what your overall goal is. For example:

#### Short, Fun, Competitive Game

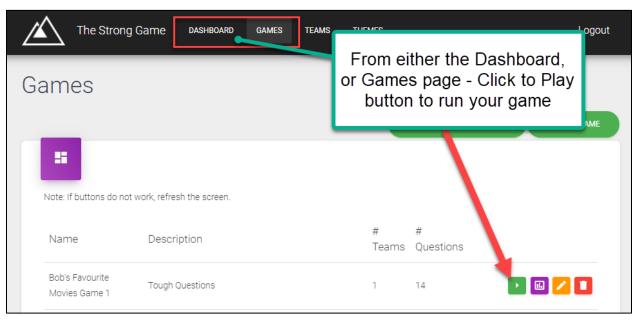

If I were creating a short, competitive 15-minute game where I wanted all my participants to just have fun answering popular trivia questions, with highest points the winner - I might shorten the 'seconds per question' to 10 seconds. This would force everyone to quickly make a choice!

#### **Collaborative Game – Used in Training**

If I were creating a collaborative game for use as a training activity, I may want to increase the seconds per question to allow everyone enough time to fully discuss the question, before providing an answer. For some softskill training activities, this may be 10 or even 15 minutes.

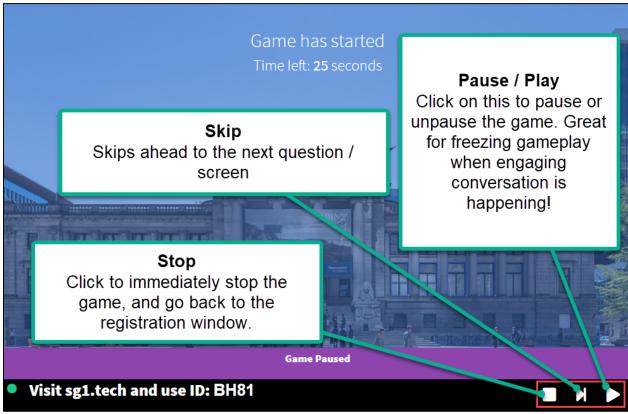

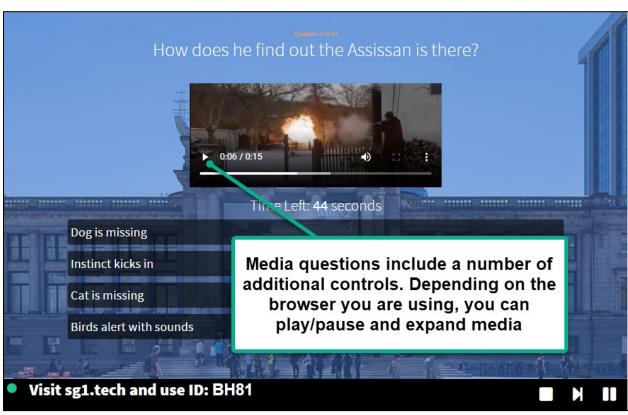

Step 6: Running a game!
